

A scatter plot showing the results of L0, L1, and L2 SVM for four different configurations: L0+L1 (green squares), L0+L2 (blue squares), L1 SVM (orange squares), and L2 SVM (yellow squares). The x-axis represents a performance metric, and the y-axis represents another performance metric. The plot shows that L1 SVM generally achieves the highest performance, followed by L2 SVM, L0+L1, and L0+L2. The L0+L2 configuration shows a significant drop in performance at the bottom right of the plot.
